"BELTO" CABLE TIES WITH FLAT HEAD

ELEKTROZUBEHÖR IS A
DISTRIBUTOR OF
SES-STERLING PRODUCTS

“BELTO” CABLE TIES WITH FLAT HEAD

Material: halogen-free Polyamide 66.

Colour: natural, black.

Operating

temperature: BELTO -40 °C / + 85 °C (short term +150 °C),
BELTO-HT -40 °C / + 110 °C (short term +180 °C)

Flammability: flame retardant and self-extinguishing UL94-V2.

Standards and

Certifications: EN 45545-2.

Features: their flat and patented fixing head is suitable for any application where the space requirement must be reduced. They integrate perfectly into the volume of the wiring harness. The flat head with no sharp edges also drastically decreases the risk of damage to cables and objects around the ties and eliminates the risk of injuring the users.

These cable ties are equipped with a pre-assembly system allowing closing and re-opening until final tightening.

They stand out also for the notching of the belt which, being external, is not in contact with cables; this allows not to damage cables even when used in environments with high vibrations.

Thanks to their compact design, the “BELTO” cable ties are the ideal solution for fixing in tight spaces (they also allow to accommodate more cables in the same space), as well as in situations in which an aesthetics installation is required.

They are available also in the high-temperature type BELTO-HT.

Due to their characteristics and EN 45545-2 certification, “BELTO” cable ties are suitable for use in any environment including the railway industry.

Tip: BELTO
