

LAMELLAR CABLES WITH IP 66 SEALED MEMBRANE

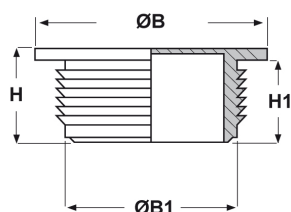

Material: Polyethylene body and TPE membrane, halogen free.

Color: light gray Ral 7035.

Use temperature: -40°C / +80°C

Features: these innovative cable glands are mounted in the pressure holes and do not risk coming out thanks to the slats. They consist of a Polyethylene body, which offers excellent stability, and a thin membrane (in white color) which is easily pierced by the cable as it passes through it. Thanks to the large surface area of the membrane, it is possible to pass several cables and even flat cables through it. These grommets can also be used as IP 66 sealing plugs.

IP protection: IP 66 according to EN 60529 specifications.

The drawing is indicative and the proportions may not correspond to the table or real dimensions.
