

HEAT SHRINK SLEEVE IN SELF-EXTINGUISHING POLYOLEFIN AND WITH INTERNAL ADHESIVE (4: 1 SHRINKAGE)

ITEM: PFD-B 8 NERA

Codice EZ: 116531

Material: polyolefin.

Color: black.

Use temperature: -55°C / +110°C

Shrink temperature: > +100°C

Shrink ratio: 4:1

Flammability: flame-retardant and self-extinguishing (only the outer wall).

Features: this sheath does not contain cadmium and is internally covered with an adhesive that ensures maximum adhesion (even on steel and plastic). In fact, under the action of heat the adhesive melts allowing the sheath to create a single body with the internal conductor and to guarantee an excellent barrier against humidity. It has an increased wall thickness which offers good mechanical protection, without compromising its flexibility. It is mainly used in the field of maintenance and repair.

On request: with a surcharge on the price, the sheath is available in sleeves of various lengths. Furthermore, for quantity, it can also be made in the following colors: white, red, blue, yellow, pink, orange, purple, green, brown or transparent (the transparent sheath is not flame retardant).

The drawing is indicative and the proportions may not correspond to the table or real dimensions.
