ERGONOMIC CLAMPS FOR INSULATED TERMINALS - "ELPRESS" SERIES -

ITEM: GSA 0760

Codice EZ: 439366

Material: hardened steel body with plastic handle.

Features: these pliers are suitable for crimping pre-insulated terminals with a section from 0.5 to 6 mm². They have been conceived with an ergonomic design that has allowed to reduce by 45% the force required for crimping and to minimize the risk of injury to operators. They are equipped inside the spout with a positioner that locks the terminal in the right position, thus facilitating crimping. The pliers with the letter "C" in the article have longer handles to be able to use both hands, thus reducing the effort even more. Very handy and compact, they are equipped with a ratchet device that guarantees optimal closure of the jaws and automatic reopening after crimping is complete. An emergency lever, in case of need, allows the reopening of the jaws before their total closure. They are also suitable for left-handers. They have laser-marked beaks with the appropriate sections. They guarantee at least 80,000 crimps. These pliers are certified by Elpress which verifies their quality (force impressed on the crimp, precision of movement, reliability, etc.). Weight: 0.70 kg, length: 220 mm (255 mm, "C" clamp), width: 72 mm.

On request: for insulated head-to-head heat-shrink joints (0.5-6 mm²) the GSW 0560C pliers are available, which do not damage the insulation.

The drawing is indicative and the proportions may not correspond to the table or real dimensions.
